Series III Home Manager System

Total Home Control and Maximum Energy Savings

The Series III Home Manager System is a complete home control system that allows homeowners to easily operate their control & entertainment systems from a central 8" Color Touchscreen.

The base system includes Temperature control, Lighting control and a complete Security/Fire Alarm system. The integration of these provides the user with the capabilities to maximize control and energy savings. Gain optimum control of lights with the built in Scheduler that allows any light to be scheduled to turn on and off at particular times or events. The system can be set up to automatically turn lights off and setback the temperature settings when the security system is armed and return them to the desired settings when the security system is disarmed. All easily established by the user.

Included in the Base System is Remote Access capability which allows the system to also be easily operated from PCs either within the home or outside the home (requires internet service).

Additional modules can be added either initially or later to add additional capabilities. Such additions can provide music throughout the home, control of pool/spa, gates, cameras, irrigation sprinklers, etc.

- 8" Color Touchscreen provides easy access and control of security, temperature & lights
- Expand system to provide music in the home, control irrigation sprinklers and view cameras
- Remote Access allows complete operation from computers either in the home or away from the home. User screens are identical to those on the Touchscreen.
- Touchscreen available in white or black trim to match any décor.
- Easily create schedules to automate lights and temperature settings for optimum energy savings.
- Separate Best-in-Class modules intelligently integrated together provide maximum performance and reliability.

Music Music Everywhere !

Is music a big part of your life that you just haven't been able to enjoy in your own home as much as you would like? Then maybe its time to harness your music and make it easily available everywhere you want to listen to it. Listen to anything you want anywhere you are. Incorporate your favorite music sources.

- *AM/FM*
- *Sirius/XM Satellite Radio*
- *iPod*
- *High capacity high quality music server*

Have an iPod with all your favorite music on it? Do your friends come over to share their iPod with you. Just slip it into the system dock and it becomes available to listen to anywhere you have speakers. And all the control you have on the iPod you now have on the Touchscreen.

Like Movies ?

Ever wish you could just sit down in your favorite couch and watch a good movie without first having to find the DVD or tolerate all the previews and commercials beforehand? If so you may be a candidate for a Kaleidescape Movie Server which effortlessly maintains and organizes your entire movie collection for viewing anytime & anywhere in your home. Simply sit down, choose your movie from your new library and within seconds your movie selection is playing. Pause anytime and continue in another room if desired. This does for movies what the iPod has done for music, and without any quality degradation.

Embellish your system further with additional control to meet your needs

Irrigation Sprinkler Control

Traditional sprinkler controllers are notoriously frustrating to use. Now you can take advantage of your beautiful 8" color palette to easily control and schedule all of your sprinklers. A rain sensor automatically disables the sprinklers during excessive rain for optimum water control.

Pool/Spa Control

Full control and scheduling of all your pool and spa equipment is now available on the Touchscreen. And no instructions are needed on how to use it. Ever want to turn the spa on before arriving home? This is your ticket. Add this to your system and there won't ever be a wait for the hot tub again.

Surveillance Cameras

Add cameras and a digital video recorder (DVR) to your system and view any live or recorded video from the Touchscreen. Typical setup allows for up to 60 days of history so it is easy to review any recent activities of interest.

Remote Access Module

Standard on every system is the ability to remotely operate your entire system from an internet connected PC. Want to change sprinkler schedules while on vacation, or turn the heat down a bit more while you are gone? No problem. Fire up your PC and its just as easy as being in front of the Touchscreen.
